# YOUR CLOUD JOURNEY

## *Business Continuity*

**Technology** *makes it possible...*
**People** *make it happen.*

**EOH**

# Deliver what your business needs – from the Cloud

*Keep your business moving forward with faster recovery time and all-encompassing cloud backup and storage capability.*

**We help your business to keep running, avoid disaster and recover quickly if required. Cloud backup and storage capability protect against data loss, with faster recovery time.**

It's unfortunate that the very technologies that have made possible so many of the business processes and practices we take for granted, have also become our biggest vulnerability.

Our dependence on these technologies is instantly obvious when people in our organisation are left unable to work if our Internet connection goes down, or when we are unable to access a company server that stores the information we need. We can't even contemplate the extent of the disaster if we were to lose all our business data.

**This is why data storage, backup and recovery have become such important aspects of doing business from day to day. They are crucial methods of ensuring business continuity – and by extension, protecting against loss of income, or worse.**

## EOH Cloud Storage

**Quickly scalable, secure data storage, allowing access from anywhere on any device.**

- Access to information from anywhere
- Improved productivity and flexibility
- No in-house maintenance, reducing costs
- Improved data security

EOH Cloud Storage is a simple, highly secure and extremely reliable way of storing business information with high availability.

There are huge business advantages to having the information your personnel need available to them wherever they are, whenever they need it. It allows people to work while travelling, at remote branches and from client premises.

Costs of data storage tend to decrease, as the resource burden of maintaining and securing in-house data servers is removed. Costs also become predictable, as you simply pay a monthly fee.

You are also able to implement more efficient work processes by taking advantage of the most advanced practices like remote working and distributed outsourcing.

**One of the most noticeable results will be increased business flexibility, with your users enjoying a more boundaryless working experience. They will be able to work more productively, where and when they need to.**

# EOH Cloud Backup

**The peace of mind in knowing that your business-critical data is safely stored in a separate backup location.**

- The reliability of full backup and recovery
- Lower total cost of ownership with predictable costs
- Hassle-free and hands-off - fully automated backup
- State-of-the-art security protects your data
- Fast recovery in case of disaster

EOH Cloud Backup is a fully managed, automated, cloud-based backup and recovery solution. It includes proactive data management and monitoring.

There's no room for human error, as your information is automatically backed up according to a defined schedule.

Your company will have the peace of mind in knowing that its business-critical information is protected by state-of-the-art security in a mirrored, off-site data centre. This also assists with governance and compliance requirements.

Proactive data administration and monitoring removes the burden of managing the complex server data backup and protection process, allowing you to focus on your core business instead of backup chores.

**EOH Cloud Backup uses advanced technology to make data recovery fast and easy. This can also be automated according to predetermined protocols to further speed up the process.**

**Two versions of this service are available, depending on where your data originates:**

- **EOH Cloud Backup – Server**

  **Secure, reliable, automated server data backup and recovery.**

  EOH Cloud Backup – Server automatically backs up your server data based on your predefined backup schedule. This backup occurs over the Internet or a private network connection, without any interruption of your productivity. A combination of proven disk and online technologies ensures a hassle-free, yet robust backup solution.
  It's a fully managed, cloud-based data protection service, with proactive data administration and monitoring removing the burden of managing the complex server data backup and protection process.

- **EOH Cloud Backup – End User**

  **Eliminates virtually all risk of data loss from desktops, laptops, tablets and other devices.**

  It ensures enterprise-grade, secure, efficient, automatic backups to help eliminate all risks of data loss from corporate desktops and laptops, both local and remote. Data on mobile devices can also be protected, managed and accessed from anywhere. It's a highly scalable solution, available as on-premise, cloud-based or hybrid cloud configurations.

  Whether you want to back up entire server farms or simply make sure that your users' every data is backed up, EOH Cloud Backup will help to ensure that you can run a more flexible, responsive business, freed from the boundaries of having to constantly manage this all yourself.

# EOH Recovery – as a Service (RaaS)

**Makes disaster recovery faster, easier and more affordable.**

Your entire infrastructure is protected to prevent the loss of productivity and money, and to help adhere to governance and compliance requirements.

- Reduces costs – no need for duplicate infrastructure
- Faster recovery time
- Only pay for what you need – easy to scale up or down

EOH RaaS replicates your complete IT infrastructure, applications and data to the cloud, enabling full environmental recovery.

It backs up the entire environment, not just the data. RaaS ensures that, whatever the reason for a disaster, your business will be able to run without, or with minimal, impact.

There is no longer a need to replicate your hardware and software environment in a second, geographically separate location. Because it is cloud-based, RaaS entirely removes this requirement. Your infrastructure, systems, applications and data are integrated into a single software bundle or virtual server – securely and far away from your primary site so that they cannot be affected by the same disaster.

By eliminating the need for duplicate infrastructure, upfront and overall CAPEX is significantly reduced.

The RaaS recovery involves not just the data and a copy of the storage, but also the business processes in the servers, applications and the consistency of the data. This allows for a truly comprehensive disaster recovery strategy, by running and restoring entire services and applications via the cloud.

**Another big benefit of RaaS is faster recovery, ensuring a speedy Restore Time Objective.**

*This all allows your business to operate as flexibly as it needs to, with the peace of mind in knowing that if anything goes wrong it will be able to respond more quickly than ever before.*

# EOH S3 Cloud Storage

**Modern, multi-tenanted storage offering endless utility**

EOH S3 Cloud Storage addresses the challenges associated with the storing of unstructured data, large archives, media repositories, and web data-stores:

- At a fraction of the cost of traditional storage arrays
- By managing massive data sets
- With unsurpassed flexibility in long-term retention

It uses the increasingly popular multi-tenanted S3 storage protocol to help organisations leverage the hybrid cloud to manage massive data sets with reduced cost and secure data management. This product adds seamless integration of cloud applications with Amazon S3 support. It also enables IT organizations to store up to 100 billion objects in a single elastic container that can be distributed in data centers worldwide.

Recently organisations have seen a drastic increase in unstructured data, this data typically ties up expensive production storage arrays. EOH S3 Cloud Storage is a platform where customers can archive this data at a fraction of the cost of traditional storage arrays.

# If you're concerned about business continuity and protecting your business-critical information…

EOH Cloud Storage, Backup and RaaS solutions are the easiest, most cost-effective way to take care of all your business information concerns.

They can either perfectly complement your other cloud services, or be used as self-contained services.

Either way, contact us to get full peace of mind around your business-critical information:
