

YOUR CLOUD JOURNEY

*Communication and
Collaboration*

Deliver what your business needs – from the Cloud

C

Communication & Collaboration

Accelerated responsiveness to get people and IP together, even when they are far away. Get information when you need it, how you need it – from the cloud.

Our cloud-based communication and collaboration services improve productivity, accelerate responsiveness and enable mobility. They connect people, and put people and IP together, no matter how far away they are from each other.

These instantly responsive services let everyone access the information they need from the cloud - when they need it, where they need it and in the way they need it.

The result is inevitable – your business will be more flexible and responsive, able to use all the benefits of cloud communication and collaboration to innovate and become a more boundaryless business.

EOH Software – as a Service (SaaS)

Avoid having to purchase, license and maintain software – we can deliver powerful software suites through the cloud (like Microsoft R365 and Azure), with costs based on usage.

We offer the big advantage to South African companies that they can enjoy higher quality access to these software suites – our cloud optimisation technologies allow them to perform as if they are being delivered from local data centres. This gives a seamless user experience of applications delivered through the cloud.

- Eliminate software purchasing, licensing and maintenance costs
- Pay as you use
- Highly scalable, easy to extend
- Improved business flexibility

EOH SaaS is not only the most cost-effective way to use enterprise software suites like Microsoft Azure – it also gives your business the use of a wide range of other business software. The software you need will always be available, without you having to buy any yourself.

Your business gets increased flexibility and scalability from its software. It's far easier to scale up the number of users or extend the software than it would be if you had to install, maintain and integrate it yourself. You thus save on resource costs as well.

All EOH SaaS solutions integrate perfectly with our other cloud services, allowing you to easily deliver them through your Private, Public or Hybrid Cloud infrastructure, or use them in combination with cloud collaboration services like EOH Cloud Filr.

They offer a new level of business flexibility and responsiveness, setting your business free and turning it into a thoroughly modern, boundaryless organisation.

Given that services and workplaces are standardised, management is simplified and costs reduced.

EOH IP Telephony in the Cloud

Our IP Telephony services offer high-quality telecommunications, while integrating with leading-edge technology. We can help you reach optimal business efficiency and maximise the value you get for your telecommunications spend.

These solutions are designed to be the voice backbone of a forward-looking Unified Communications (UC) platform that allows companies to use the very latest communication and collaboration technologies and techniques.

- Reliable, fixed price per user
- Free on-net calls across all network service providers
- No upfront capital outlay
- Virtual PBX services – no need to buy your own physical devices

IP Telephony is becoming a part of a larger, extremely powerful UC environment. We give you a smooth, interruption-free transition to IP-based communication.

EOH IP Telephony in the Cloud is a fully managed IP cloud telephony solution. It's simplicity itself: we host everything, including all PBX features and functionalities in our data centre, and you rent everything you need through the cloud. There's no need to worry about physical components, because we use a virtual PBX instance that runs across a multi-tenanted rack.

Because services and workplaces are standardised, management is simplified and costs reduced.

This means that you can provision your own users yourself – giving your business flexibility, scalability and improved customer responsiveness. They can also be auto provisioned on a single portal.

EOH IP Telephony in the Cloud is network-agnostic. The big benefit of this for your business is that, unlike with other service providers, we give you free on-net calls across all network service providers.

Voice minutes are charged on a usage-based model. You can see all your billing online and use the workflow provided to provision and approve additional features that you wish to add.

EOH IP Telephony in the Cloud also incorporates the Cisco Jabber platform. This unifies the entire range of UC technologies into a single desktop client:

- Ip telephony (voice)
- High definition video
- Instant messaging
- Voice messaging
- Conferencing
- Screen sharing
- Presence

We also have an extensive range of high-quality IP phones.

For the best voice quality, we recommend using an MPLS network from EOH Network Solutions.

By bringing the future of Unified Communications into your company, EOH IP Telephony in the Cloud is a powerful way of making your business more flexible, agile and responsive than ever.

We open a world of boundaryless communications for your organisation.

EOH Cloud Filr

Enjoy one of the biggest benefits available to modern businesses – the improved productivity of different people being able to share files and collaborate from different places.

An enterprise-grade file sharing solution that allows you to upload, share and access any type of file completely securely. Files can be accessed from any device at any time, including mobile devices. These are synchronised across devices with full version control and backup.

- Collaborate and share files at any time from anywhere
- Enjoy the peace of mind of full backup
- Full mobility through mobile device access

Enterprise-grade file sharing solution

EOH Cloud Filr allows users to easily and securely share files across company networks, synchronise files to Mac or PC, and access them on any mobile device.

Versioning and backup

Cloud Filr ensures that you will always have the latest version of any document you are working on – it will notify you whenever a new version is saved. It also has a backup function so you'll never have to worry about losing your work.

Very secure file sharing

Your files and data remain in your secure company file storage. EOH Cloud Filr simply deploys the software required to enable file sharing.

Mobile file sharing access

You can access files from any mobile device, anywhere you are – without having to be online. If you make changes on one device, the latest version of the file becomes available on all your other devices.

And because all data is backed up, if you lose a mobile device, you won't lose any work.

The vastly improved efficiency and productivity that file sharing and collaboration offer will turn your business into a more responsive, productive organisation. It will be more flexible and agile, able to execute quicker and respond more effectively to customer demands.

Controlling it all - EOH Cloud Manager

Manage everything you deploy in the cloud from a single interface.

EOH Cloud Manager is a single portal that gives you the ability to create, provision, monitor and manage all your different cloud services.

You can use it for everything from provisioning individual virtual desktops to managing your entire cloud infrastructure – with constant control over the workflow process and full cost visibility.

We can give you visibility and control without having to install expensive management tools and software, vastly reducing cost.

It's the control interface of your entire cloud environment – the foundation on which you can build a more flexible, boundaryless business by putting the cloud to full use.

EOH Cloud Manager gives you a powerful tool with which to manage all your cloud-delivered software services (SaaS).

You're able to quickly provision new software or new users, thus improving business productivity. No more waiting around for software to be installed or for new licences to be paid. This makes your business more flexible, able to add resources as you need them.

EOH Cloud Manager is the central interface where you control all your IP Telephony services.

You can scale your services up and down, add new devices and capabilities, and manage your entire voice and PBX environment, all through the cloud. Provisioning IP telephony services is quick and efficient, with improved cost visibility and control, and segmented billing to match your organisational structure.

Of course you can also use EOH Cloud Manager to control your Cloud Filr services.

Communication and collaboration have never been as powerful as they are with the cloud – your business can only benefit.

Whether your business needs powerful, enterprise-grade software suites without the cost of purchasing them, or wants to start taking advantage of the most advanced IP telephony technology as part of a unified communications approach, we have everything you need.
